

PROFILE

I'm a data analyst with hands-on experience in **statistical modeling, machine learning, and time series analysis**, using Python, SQL, Power BI, and other visualization tools to take projects from raw data to delivered insight. Over the past two years, I've **built a portfolio of end-to-end projects**, from data cleaning through dashboard delivery.

SKILLS

PROGRAMMING:
Python

QUERY & FORMULA:
Azure SQL, DAX

PYTHON LIBRARIES:
Pandas, NumPy, Statsmodels, SciPy, Scikit-learn, MNE

VISUALIZATION:
Power BI, Tableau, Matplotlib, Seaborn

STATS SOFTWARE:
JASP, SPSS

OTHER:
Git, Brian Simulator, MS Office

EDUCATION

University of Amsterdam
Amsterdam, The Netherlands
MSc Brain & Cognitive Sciences (Cognitive Neuroscience)
Sep 2022 – Aug 2024

Fergusson College
Pune, India
MA Clinical Psychology
Jun 2019 – May 2021

LANGUAGES

English (C2) · German (B1) · Dutch (A2)

PARINEETA EKHANDE

DATA ANALYST

PROJECTS

Hospital Readmission Risk Analysis ↗

Tools: Python (Pandas, Scikit-learn, Statsmodels), Azure SQL Database, Power BI

Built an **end-to-end data pipeline** on 100K+ patient encounters to predict 30-day hospital readmission. Found patients with heavy prior ER/inpatient use were readmitted at nearly **3x the baseline rate (34.5% vs 11.4%)**; built a logistic regression risk model and a Power BI dashboard used as a daily discharge-planning watchlist, validated against the original published study.

A/B Testing & User Engagement Analysis ↗

Tools: SQL Server, Tableau

Designed and ran a SQL-based A/B test on ad campaign data to measure whether the test experience actually moved conversion. Found a **statistically significant 42% relative lift** (2.55% vs 1.79%), with high-activity users converting up to **15x more** than low-activity ones. This identified engagement depth, not raw exposure, as the lever worth spending budget against.

Retail Sales Analysis ↗

Tools: Power BI (star-schema data model, DAX)

Built a Power BI report on a **star-schema data model** (fact + product/customer dimension tables) to find what drives revenue by category, season, and demographic. Found **Electronics leads on revenue despite lower transaction volume**, with spending splitting sharply by age and gender, informing seasonal and audience-targeted promotions.

Cognitive Decline Monitoring ↗

Tools: Python (Pandas, Seaborn), Azure SQL Database, Power BI (DAX)

Built an **end-to-end pipeline** on 150-subject OASIS-2 longitudinal MRI data, using Python for cleaning, SQL for analysis, and Power BI for the dashboard, framed as a memory clinic monitoring protocol. Found early brain decline can precede memory-test decline, and that post-diagnosis volume loss **varies up to 7x in pace** across patients.

Customer Segmentation Analysis ↗

Tools: Python (Pandas, NumPy, Scikit-learn, Seaborn), Excel, Git

Segmented bank customers on four financial behaviors (balance, purchases, credit, payments) using PCA (3 components, ~80% variance) plus **elbow and silhouette analysis across k=2–10** to justify k=4. Resulting clusters (Conservative, Balanced, Premium, Emerging) were **separable enough for a decision tree to recover them at 96%**, confirming the segments were coherent and interpretable.

Further work: currency exchange time series, neuron simulation study, EEG replication study at GitHub.

EXPERIENCE

University of Amsterdam — **Amsterdam, The Netherlands**
Teaching Assistant, Research Design & Statistics — *Nov 2023 – Dec 2023*

Managed Canvas, the student platform, ensuring effective management & functionality. Evaluated and assessed student assignments of a class of 13 students.

Reboot Wellness — **Gurgaon, India**
Counselling Psychologist — *May 2022 – Aug 2022*

Led **end-to-end development of 4 projects** involving clinical survey design, **data analysis (Excel/SPSS)** & client reporting within the Employee Assistance Program (EAP). Cross-functional collaboration with various teams for seamless integration of survey results into strategies for employee well-being.
